

SAB Bearings – Product Profile

WE PROVIDE MORE THAN BEARINGS. WE PROVIDE SOLUTIONS THAT DELIVER RESULTS.

'SAB' as a leading Bearing Manufacturer in India provides bearing solutions for vast range of industrial applications.

Faster lead times, an expanding product line, state-of-the-art factory and a proprietary product quality management system has positioned us as a performance leader in the bearing industry.

All our bearings are manufactured with our most advanced Bearing Technology to significantly extend the life of bearings and reduce metal to metal friction – saving time and operation costs.

As a value added service, we offer complete bearings fitment to maintenance solutions to our valued customers.

At SAB we have developed a proprietary product quality management system that provides for continuous improvement, emphasizing defect prevention and the reduction of variation and waste from our processes and throughout the supply chain.

We provide complete engineering services and technical support – from bearing application assessment to custom product development and review.

Our engineering team design bearings and components to help our customers achieve their technical and commercial requirements.

Manufactured at our world-class manufacturing facilities in Eastern India, SAB is the most trusted name in the design to production of antifiction bearings & customized friction solutions.

The company has grown steadily, delivering reliable bearings solutions and customer services. Our vast experience across various industry verticals has allowed us to evolve from leading manufacturer to complete fraction solution providers for various industry sectors.

Our speed, large inventory and consistent on-time deliveries enabled us to become the most reputed bearing supplier in India in a very short span of time.

Industrial Portfolio (After-market Bearings) served by us –

- Metal Production and Processing
- Power plants
- Mining & Processing
- Cement
- Pulp & Paper
- Sugar Mills
- Heavy Earth Moving Equipment
- General Engineering
- Industrial Transmission
- Construction Machinery
- Agriculture

SAB Offers –

- ✓ A highly professional & competent sales team with technical background, which allows us to serve customers, answer preliminary technical queries or complaints.
- ✓ Partnership approach through our network across major industries centres.
- ✓ Widest range of bearing Inventory and Just-in-time deliveries.
- ✓ Scalable and tailor-made services for all industrial applications.
- ✓ Mapping Customer requirements for Preventive & Pro-active maintenance.
- ✓ Offers an entire portfolio of aftermarket bearings in Ball and Roller Bearings segment seamlessly to our customers across India mainly in Steel sector and heavy Industrial segment.

Product & Solutions –

- Ball & Roller bearings for a wide range of industrial applications.
- Support to Maintenance, bearings fitment to providing technical support for increasing the bearing life.
- Advice in proper selection and replacement of bearings for specific applications.

Unique Technological Features

SAB design and production engineering measures lead to better and more uniform surfaces and contact zones, resulting in a considerable improvement in load distribution within the bearing and a significant reduction in frictional torque. This in turn leads to higher basic dynamic load ratings compared to the previous standard and thus to a longer bearing operating life.

Our client benefits from the longer bearing rating life and the extension of the maintenance intervals. This in turn improves the **“Total Cost of Ownership”** and the reliability of the specific machine or equipment.
